CERTIFIED MAIL NO. 7000 1670 0009 6843 8753 RETURN RECEIPT REQUESTED

Mr. and Mrs. Jeff Smith
215 N. Jackson Street
Crystal Springs, Mississippi 39059

RE: 215 N. Jackson Street
Crystal Springs, Copiah County, Mississippi

Dear Mr. and Mrs. Smith:

The Uncontrolled Sites Section of the Mississippi Department of Environmental Quality (MDEQ) has completed a review of the attached *Site Remediation Report*, dated April 2001, prepared by Martin & Slagle, GeoEnvironmental Associates, LLC, for the above referenced property. Also, please find enclosed data sheets containing sample results from analysis conducted by MDEQ's laboratory on split samples collected on your property. The MDEQ requires no further action at this site at this time.

If cleanup standards change or additional data becomes available for the site, then MDEQ will notify the appropriate parties of the need for any additional investigation(s) or remedial action(s). These actions will be consistent with our need to protect human health, welfare, and/or the environment.

If you have any questions, concerning this matter, please contact Gretchen Zmitrovich at (601) 961-5240.

Sincerely,

Tony Russell, Chief
Uncontrolled Sites Section

RE: soil and wipe sampling

Dear Mr. and Mrs. Smith:

Please find attached the report for the soil and wipe sampling recently conducted at Crystal Springs, MS. The report includes the following:

1. a map showing the sampling locations,
2. a table containing the sample results from the analysis conducted by the mobile laboratory, Environmental Chemistry Consulting Services, and
3. data sheets containing the split sample results from the analysis conducted by the fixed laboratory, Paradigm Analytical Laboratories, Inc.

The MDEQ has scheduled a meeting at 6:00 p.m. on Tuesday, October 10, 2000 at City Hall in Crystal Springs to discuss the results and the remediation of your property. Please contact Gretchen Zmitrovich at 601-961-5240 if you have any questions regarding this report.

Sincerely,

Tony Russell, Chief
Uncontrolled Sites Section

Comment:

Tentatively identified Compound (TIC) refers to substances which are not present in the list of target compounds. Therefore, not all TICs are identified and quantitated using individual standards. TIC listings are prepared utilizing a computerized library search of electron impact mass spectral data and evaluation of the relevant data by a mass spectral data specialist.

Quantitation is accomplished by relative peak height of the compound compared to that of the nearest internal standard from the total ion chromatogram. TICs are identified and quantitated only if the peak height is equal to or greater than 10% of that of the nearest internal standard. Quantitation provided is an estimate.

SUBJECT: Revised Maps for Site Remediation Reports
Medical Center and Dabney-Smith Properties
Crystal Springs, Mississippi

Dear Ms. Zmitrovich:

Enclosed are revised maps for the Site Remediation Reports for the Medical Center and Dabney/Smith properties in Crystal Springs, Mississippi submitted to the Mississippi Department of Environmental Quality (MDEQ) in April 2001. Laboratory data sheets are included for samples GS-1, GS-2, and GS-3, which were collected from beneath the shed buildings on the Dabney/Smith property.

Two sets of maps for each site are included in this submittal. All information included in this package should be attached to the appropriate Site Remediation Report when transmitted to the property owners.

If you have any questions or comments, please contact me at (828) 669-3929.

Sincerely,
MARTIN & SLAGLE GEOENVIRONMENTAL ASSOCIATES, L.L.C

Subject: remediation reports

I have finished reviewing the reports and revised maps for the Dabney/Smith, medical clinic, and duplex properties. In lieu of sending a formal letter, I am submitting my comments to you via e-mail in hopes of expediting the process.

Medical clinic property:
1. On Figure 3, the following sampling locations are mislabeled: MCESS-8 given as KESS-8, MCESS-117 given as E117, MCEFS-5 given as MCEFC-5, MCDS-3 given as MCD5-3, MCDS-4 given as MCD5-4. MCESS-1 is on map twice-once by 18" pine and once in driveway; only have data for one sample. There was no data submitted for the following sampling locations: MCESS-47, MCESS-48, MCESS-49, MCESS-50.

2. The following sampling locations were on both Figures 2 (revised) and Figure 3, but in different locations: MCESS-52, MCESS-53, MCESS-54.

3. On Figure 2, MCEFS-73 is on map twice-once by covered carport and once on the Dabney/Smith-medical clinic property line; only have data for one sample.

4. I have data for the following samples but they are not on either map: MCEFS-6, MCEFS-10, MCEFS-16. MCESS-14. MCESS-15.

Dabney/Smith property:
1. On Figure 3, DSEFS-50 given as DSSEFS-50.

2. On Figure 2 (revised), DSEFS-39 given as EFS-39.

3. I have data for samples DSESS-17 and DSEFS-46, but they are not on either map.

4. On Figure 3, the samples taken around the current shed location are hard to read because of the black outline of the shed. I have data for DSESS-33, DSESS-35, and DSESS-36; however, it appears that only 2 of these are on the map.

5. I took 2 split samples with Kelly on Dec 4. Samples were labeled GS-1 and GS-2. They were taken in the gravel under the roofed area where I believe Jeff kept his boats. These samples are not on the map, nor are the data included in the report.

Duplex property:
I will be issuing a no further action letter on this property.

Submit revised maps, etc. by July 16. Paulette Herring with Dr. Kruss's office has been anxiously calling me for a submittal date on the no further action letter for the medical clinic. Last month I told her by the end of June, first of July. Jeff Smith has also been awaiting his report. These properties were finished months ago and we need to get them their reports and letters as soon as possible.

SUBJECT: Addenda to Site Remediation Reports for Medical Center and Dabney-Smith Properties Crystal Springs, Mississippi

Dear Ms. Zmitrovich:

Enclosed are addenda to the Site Remediation Reports for the Medical Center and Dabney/Smith properties in Crystal Springs, Mississippi submitted to the Mississippi Department of Environmental Quality (MDEQ) in April 2001. Remediation of these properties is complete.

Per your request, an additional sample location map has been generated for each site showing the locations of samples collected from within the soil that has been removed from the site and disposed of in accordance with DEQ requirements. Additionally, revisions have been made to the sample location maps showing confirmation of remediation to correct minor errors. A revised summary Table 1 and a field laboratory data errata sheet for the Dabney-Smith property are also included. The revised summary Table 1 was corrected to eliminate duplicated field sample identification numbers. The errata sheet identifies the field sample ID modifications for the field lab data sheets.

Two sets of addenda for each site are included in this submittal. All information included in this package should be attached to the appropriate Site Remediation Report when transmitted to the property owners.

Samples shown in bold were collected from locations along the common boundary with KEC.
* The "A" designation is added to selected field sample IDs to distinguish them from duplicated field sample IDs.

ERRATA SHEET

Field Laboratory Report
Site Remediation
Dabney-Smith Property
April 2001

1. The prefix "DS" is changed to "JS" per the field notes and chain of custody record for the following field sample identification numbers:

Field Lab Sample ID	Sample ID	Sample Depth (ft bgs)	Date Collected	Time Collected	New Sample ID
1381	DS-ESS-1		26-Oct-00	17:40	JS-ESS-1
1382	DS-ESS-2		26-Oct-00	17:44	JS-ESS-2
1383	DS-ESS-3		26-Oct-00	17:46	JS-ESS-3
1384	DS-ESS-4		26-Oct-00	17:48	JS-ESS-4
1385	DS-EFS-1		26-Oct-00	17:42	JS-EFS-1

2. The suffix "A" is added to the following sample designations:

Field Lab Sample ID	Sample ID	Sample Depth (ft bgs)	Date Collected	Time Collected	New Sample ID
1470	DS-ESS-16		30-Oct-00	12:21	DS-ESS-16A
1471	DS-ESS-17		30-Oct-00	12:29	DS-ESS-17A
1472	DS-ESS-18		30-Oct-00	12:37	DS-ESS-18A
1473	DS-ESS-19		30-Oct-00	12:38	DS-ESS-19A
1474	DS-ESS-20		30-Oct-00	12:38	DS-ESS-20A
1475	DS-ESS-21		30-Oct-00	12:41	DS-ESS-21A

3. The following sample ID was changed from DS-EFS-61 to DS-EFS-62.

Field Lab Sample ID	Sample ID	Sample Depth (ft bgs)	Date Collected	Time Collected	New Sample ID
AA09859	DS-EFS-61		27-Jan-01	8:10	DS-EFS-62

Re: **Progress Report of Assessment and Remediation Activities**
Kuhlman Electric Corporation and Residential Properties
Crystal Springs, Mississippi

Dear Ms. Zmitrovich:

This is a progress report to summarize the assessment and remediation activities related to PCB contamination at Crystal Springs, Mississippi. BorgWarner's last update was October 31, 2000. As you are aware, pursuant to the indemnity agreement between Kuhlman Electric Corporation (KEC) and BorgWarner Inc., BorgWarner has continued the assessment at the KEC plant and began the assessment of residential properties along a drainage channel downgradient of the plant. BorgWarner has also been actively remediating those properties adjacent to the KEC plant for which access was previously granted and sampling was complete.

BorgWarner, as it stated in its October 31, 2000 letter to the Mississippi Department of Environmental Quality (MDEQ), remains committed to working closely with MDEQ, USEPA, local government and KEC in a cooperative manner to accomplish the tasks necessary for the protection of human health and the environment, to the extent that the circumstances are covered by its contractual indemnity to KEC. BorgWarner will continue to seek MDEQ's guidance and direction in its current and future intended activities and to promptly share information.

ACTIONS TAKEN AND PLANNED

1. Delineation of Residential Properties along Jackson and Lee Avenues

BorgWarner promptly and voluntarily began sampling and delineation activities at the residential and commercial properties, adjoining the KEC plant that appeared to or reportedly have been affected by runoff or by the removal of soil from the KEC plant prior to October 6, 1999.

Under MDEQ's supervision, BorgWarner conducted delineation activities of these properties during the month of August, 2000. A total of eighteen (18) properties were investigated, which were:

1. Perry Smith, 219 North Jackson Street
2. Stringer Funeral Home, 301 North Jackson Street
3. Stringer Rental Property, 303 North Jackson Street
4. Harold and Suzanne Warren, 403 North Jackson Street
5. Elnor Wright, 401 North Jackson Street
6. Sonny Reeves, 405 North Jackson Street
7. Brent Property, 403 Lee Avenue
8. Louie Lang/David Vinson, 407 North Jackson Street
9. Jerry Youngblood, 100 Lamar St.
10. Medical Clinic, Lee Avenue
11. Edwards Property, 406 Lee Avenue
12. Garment Shop, 414 Lee Avenue
13. Frazier Property, 405 Lee Avenue
14. Duplex Property, 408/410 Lee Avenue
15. Kellum Property, 412 Lee Avenue
16. Dabney/Smith Property, 215 North Jackson
17. Cooper Property, 409 North Jackson
18. Larry and Carol Wright, 305 North Jackson

BorgWarner acted under the continuous guidance and direction of the MDEQ with respect to delineation activities at the residential and commercial properties adjoining the KEC plant. Split samples were analyzed and QA/QC procedures were implemented by two laboratories experienced with polychlorinated biphenyl analysis. Samples were frequently split with on-site MDEQ representatives for MDEQ's independent analysis, which to our knowledge consistently correlated with BorgWarner's on-site and off-site laboratory analytical results.

The delineation activities were conducted utilizing the " US EPA, Region IV Environmental Investigations Standard Operating Procedures and Quality Assurance Manual," May 1996 (EISOPQAM), sampling and analytical protocols. A copy of the work plan with procedures used in the field and applicable sections of the EISOPQAM are attached to this report for reference purposes.

Upon completing the delineation activities, BorgWarner compiled and submitted the analytical results on October 2, 2000 to MDEQ and US EPA, Region IV. Subsequently, BorgWarner began to schedule the remediation of residential and commercial properties adjacent to the KEC plant and along Jackson and Lee Avenues for which access was granted with the assistance of MDEQ and City of Crystal Springs Mayor Webb and where an attorney and/or an independent consultant were not involved in performing conflicting sampling activities.

2. Remediation of Residential Properties

On October 16, 2000 BorgWarner initiated remediation activities at the Medical Center and the Dabney/Smith properties, which are adjacent to the KEC plant. Remediation of the Newman Duplex, on Lee Avenue, began on November 30, 2000. Remediation of these properties involved excavation and disposal of all soil containing 1.0 part per million (ppm) or greater of PCBs in accordance with MDEQ's established clean-up criteria for residential properties. All soils containing greater than 1 ppm PCBs but less than 50 ppm PCBs were profiled and disposed of at the BFI's "Little Dixie" Subtitle D Landfill in Madison County, Mississippi after MDEQ and US EPA, Region IV approvals were obtained.

Following excavation, all excavated areas were sampled to confirm that impacted soil had been removed. In correspondence regarding disposal requirements, Craig Brown of US EPA, Region IV, stated that the excavated soils did not meet the definition of "PCB remediation waste." Under this definition, the remediation activities fell under the management criteria and guidelines set by MDEQ. As a result, the remediation and confirmation of clean-up standards established by MDEQ guidance were adopted and implemented in all of BorgWarner's residential remediation activities. A grid with ten-foot (10) sampling point centers was used to confirm that impacted soils had been removed at each site.

The remediation of the Dabney/Smith, the Medical Center and the Newman duplex property resulted in the removal of 1400 tons of soil, which was disposed of at the BFI "Little Dixie" Subtitle D Landfill and replaced with 1500 tons of certified clean soil. During the remediation activities, the on-site laboratory analyzed 324 soil samples in the month of November and the fixed-base laboratory analyzed 32 quality control samples.

Vegetation, such as live oak trees, was treated with specialty equipment for maximum protection and to minimize damage to the root systems. Soil surrounding the live oak tree roots was removed using an "Air Shovel"™, a unique technology adopted specifically for this purpose. The Air Shovel™ uses a pressure spray to dislodge soil from around the roots while a vacuum system removes the soil and water by vacuuming into a tank. This method of soil removal has performed effectively with minimal damage to the tree's root system as was confirmed by the landscaping contractor and arborist. However, this process, regardless of its effectiveness, is very tedious and as a result only the tree on the Dabney/Smith property was completed during the second half of November. One other live oak tree, located on the Medical Center property, remains to be treated in a similar fashion and is scheduled for January 2001.

Landscaping and replacement of structures (sheds, car ports, etc.) on both the Medical Center and the Dabney/Smith properties are continuing and will most likely be completed by the end of December 2000. Both properties have been surveyed and the fence between the Dabney/Smith and Medical Center properties is currently being re-installed. Landscaping has been completed on the Newman duplex property.

Third party independent sampling activities commissioned by the Nutt & Associates Law Firm have interfered with planned remediation activities along Lee Avenue, specifically at the Frazier's, Edward's, and Kellum's properties. The Garment Shop is a more complicated matter for two reasons. First, the impacted soil at the Garment Shop is located at the property line between it and the Kellum residence and second, the Kellum elm tree roots extend to the Garment Shop property itself. BorgWarner has filed a Freedom of Information Act request to MDEQ in an effort to obtain a copy of the recently submitted report generated by these independent parties.

BorgWarner, after its evaluation of the sampling results and data contained within the third party report, will begin discussions with the attorney(s) representing each resident (mentioned above) along Lee Avenue in an attempt to resolve the matter, including confirmation that all sampling results have been disclosed, and whether further sampling is necessary, and confirm access to then remediate those properties. BorgWarner also plans to keep MDEQ appraised of any developments and any progress or if no progress is being made with the attorney(s) involved.

BorgWarner will schedule delineation activities for the Gas Station, which is at the corner of Lee Avenue next to the Garment Shop, Mayor Webb's residence and the drainage pathway to the south. BorgWarner will inform MDEQ of the timing for those activities.

3. Drainage Channel Properties

Beginning on October 30th through the end of November, BorgWarner collected and analyzed soil samples from nine properties situated along the drainage channel leading from the north side of KEC's plant site to Lake Chautauqua. The properties were:

1. Sojourner Property, 111 M^{c}Pherson Street
2. Weathersby Property, 101 Forest Street
3. Robert Williams Property (Lonnie Williams' residence), 103 Forest Street
4. Flossie M^{c}Murray Property (Ralph Williams residence), 104 Forest Street
5. Ralph Williams Rental Property, 107 Forest Street
6. Richard Williams Property, 102 Forest Street
7. Roberta Fitzgerald Estate Property, (R.P Edwards point of contact) 108 Tucker Street Property currently is being rented to the Kendrick family.
8. Welch Property, 501 Camp Street
9. Orister Harris Property, 311 West Railroad Avenue

A total of 650 soil samples was collected from these properties and analyzed by the on-site laboratory. The fixed-base laboratory analyzed an additional 65 samples for confirmation and quality control purposes. These preliminary assessment activities were conducted in the same manner as the Kuhlman plant preliminary site assessment and the KEC plant adjacent residential properties; and utilizing the "EPA, Region IV Environmental Investigations Standard Operating

Procedures and Quality Assurance Manual", May 1996 (EISOPQAM), sampling and analytical protocols.

Preliminary results available at this time indicate that six of the nine properties that were sampled will require certain remediation. Four properties, including the Sojourner, Williams' rental, Harris and Welch properties, will require remediation under the MDEQ guidelines since the highest concentrations detected are less than 50 ppm. Two properties, including the M[S]Murray and R. P. Edwards properties, have soil with PCB concentrations greater than 50 ppm and therefore will require remediation under the TSCA rules. The following is a list of properties where concentrations greater than 1.0 ppm PCB were detected as well as the highest detected concentration on each property:

Property	Highest Detected Concentration
Sojourner	2.6 ppm
Williams rental	30.0 ppm
Harris	1.2 ppm
Welch	8.4 ppm
M[S]Murray	70.0 ppm
R. P. Edwards	51.0 ppm

Data from this sampling event are being evaluated and once quality control measures are completed the data will be tabulated. Site-specific reports containing collected data, maps of sampling locations, and work plans for remediation, if required, for each individual site are also being prepared and will be submitted to MDEQ and US EPA, Region IV by January 12, 2001.

It is anticipated that additional sampling will be required along the drainage channel. Several undeveloped properties, either abutting the drainage channel or through which the drainage channel runs, will be sampled to delineate the extent of possibly impacted soil and determine the potential for future runoff to Lake Chautauqua. The Department will be kept appraised as to the timing for this additional investigation and sampling activity.

4. KEC Plant

After an initial phase of sampling in the areas identified by KEC's construction activities and the related equipment decontamination zone, BorgWarner conducted further, substantial sampling activities in the south and north parking lot areas as well as the former above ground storage tank area. These delineation activities, other than any possible data gaps, have been completed. The results are currently being tabulated and compared for correlation purposes between the on-site and off-site laboratories, prior to being issued to MDEQ. Should any data gaps exist, BorgWarner will conduct further sampling activities.

This additional data will be incorporated as an addendum to the *Preliminary Site Assessment Report,* submitted to MDEQ in July 2000. Comments to the *Preliminary Site Assessment Report* made by MDEQ will also be addressed and included in the addendum submittal. It is anticipated that the addendum report will be submitted to MDEQ by February 12, 2001.

5. Lake Chautauqua

BorgWarner intends to consider delineation of the sediments at Lake Chautauqua, ecological assessment, and surface water sampling, to the extent appropriate after receipt of the pending "Task Force" report. These activities will not begin on any great scale until the Task Force report is evaluated.

6. Groundwater Delineation

BorgWarner intends to delineate the nature and extent of any groundwater contamination relative to the KEC plant. Groundwater delineation will take place at the time that remediation at the KEC plant commences. It is critical that the protective cover at the KEC plant site is not disturbed for the time being and that the groundwater investigation is addressed when BorgWarner is actively remediating on the KEC plant property. This approach will ensure that sediments from the KEC Plant do not travel to the drainage channel and Lake Chautauqua.

BorgWarner remains dedicated to continuing its open communication with MDEQ and US EPA, Region IV and looks forward to the meeting with MDEQ and City of Crystal Springs Mayor Webb and other Crystal Springs representatives on January 17, 2001 (at 8:30 a.m.) to further discuss any of the above and share its plans for future activities.

Should you have any questions or comments, please contact me directly at (810) 497-4503 at your earliest convenience.

Very truly yours,

Anastasia Hamel

WORKPLAN FOR THE PRELIMINARY ASSESSMENT AND REMEDIATION OF PCB CONTAMINATION IN SOIL KUHLMAN ELECTRIC CORPORATION FACILITY AND RESIDENTIAL COMMERCIAL PROPERTIES IN CRYSTAL SPRINGS, MISSISSIPPI

As established by the Mississippi Department of Environmental Quality (MDEQ) guidelines in connection with this project, all work related to the preliminary assessment of the extent of contamination at the Kuhlman Electric Corporation (KEC) facility and work related to the preliminary assessment and confirmation of remedial actions at KEC adjacent residential/commercial properties and residential properties along the drainage channel (leading from the north side of KEC's facility to Lake Chautauqua) has been performed in accordance with the *Environmental Protection Agency (EPA), Region IV "Environmental Investigations, Standard Operating Procedures and Quality Assurance Manual", May 1996 (EISOPQAM).*

Copies of relevant and applicable portions of the EISOPQAM are maintained on site during all field activities and all field personnel are trained in its implementation. Remedial action confirmation sampling grids were established using *MDEQ Guidance Document, Verification of Soil Remediation, Environmental Response Division, Waste Management Division, April 1994, Revision 1.* Specifically, sampling grids were based on Part 2-Medium and Large Site Soil Cleanup Verification, "Establishing Grid Interval."

Field operations were performed under the site-specific Health and Safety Plan guidelines. Modified Level "D" Personal Protective Equipment (PPE) was utilized by all personnel working within the investigative area.

Sampling Objectives

The soil-sampling objective is to establish the vertical and horizontal extent of contamination resulting from historical facility operations. In the KEC facility case, the soil-sampling objective included historical use of polychlorinated biphenyl (PCB). All sampling procedures were conducted in accordance with the US EPA, Region IV EISOPQAM. Sampling procedures included the collection of soil samples on a twenty foot triangular grid, where possible, at discreet depth intervals. Surface and subsurface soil samples were collected using GeoProbe® MacroProbe™ direct push sampling equipment. The GeoProbe® system uses a hydraulically driven hammer to advance a hollow, split-barrel sampler to the desired depth. The sampler contains an acetate liner in which a sample of the cored soil is retained. The MacroProbe™ corer retains a 1.25-inch diameter continuous 4 feet in length core sample. Once sampling is completed, the direct-push boring holes are backfilled with bentonite chips in unpaved areas, and with grout in parking lots and other paved areas.

Throughout the delineation activities each direct-push boring was sampled at 0.5-3.0 feet below ground surface (bgs) and at 3.0-6.0 feet bgs. Selected borings were completed to depths varying from 8-12 feet bgs and sampled in these deeper intervals to evaluate the vertical distribution of contaminants.

Additional sampling of dust, stream and drainage ditch sediments, surface water and ground water were collected, as warranted, in accordance with applicable EISOPQAM guidelines.

Analytical Methods

Samples that were collected were analyzed for PCBs by the on-site mobile laboratory, Environmental Chemistry Consulting Services (ECCS) of Madison, Wisconsin. Initially soil samples were also analyzed for chlorinated benzenes until data confirmed that chlorinated benzene contamination is not at issue in samples with low concentrations of PCBs (generally <20 ppm). At least 10% of all samples were split and sent to a fixed-base laboratory, Paradigm Analytical Laboratories, Inc. (PAL) of Wilmington, North Carolina for analysis of the same parameters as for the on-site mobile laboratory to corroborate the results of laboratory analyses for quality control and quality assurance measures. Both the on-site and fixed-base laboratories used the same standard EPA approved analytical methods. PCBs were analyzed by Modified Environmental Protection Agency (EPA) Method 8080/81 and chlorinated benzene compounds were analyzed by EPA Method 8270. Volatile organic compounds (VOCs) were analyzed by EPA Method 8260 for samples suspected of being impacted by other industrial processes solvents unrelated to PCBs. Select soil samples were also analyzed for silver, by EPA Method 6010B, and cyanide, by EPA Method 9012A.

Surface water samples were analyzed by PAL for PCBs using EPA Method 8080/81. Semivolatile organic compounds (SVOCs) were analyzed by EPA Method 8270, Volatile Organic Compounds (VOCs) were analyzed by EPA Method 8260, silver by EPA Method 6010B, and cyanide using Standard Method 4500 Cn-E. Perched ground water was analyzed for PCBs, SVOCs, and VOCs by the same methods as indicated above for surface water.

Quality Control

The following is the list of key personnel dedicated to this project:

Project Manager:	Mr. Robert Martin, Martin & Slagle GeoEnvironmental Associates, LLC
Duties:	Responsible for management of project including all field coordination efforts.
Field Sample Custodian:	Mr. Robert Martin, Christine Slagle, Martin & Slagle GeoEnvironmental Associates, LLC
Duties:	Maintaining custody of samples, completing sample labels, Chain-of-Custody record.
Field Team Leader:	Mr. Robert Martin, Martin & Slagle GeoEnvironmental Associates, LLC
Duties:	Responsible for all activities related to the collection of samples.
Samplers:	Tim Fitzpatrick, Christine Slagle, Robert Martin
Duties:	Individuals responsible for the actual collection of samples.
Laboratory Sample Custodian:	Mr. Michael Linskens, ECCS Mr. Nicolas Schertz, ECCS Ms. Erin Staagard, PAL
Duties:	Individuals responsible for accepting custody of samples from the field sample custodian.

Quality Assurance Objectives for Data

Data for this project is being generated by two separate entities. The on-site data is generated by ECCS in their mobile laboratory. The fixed-base laboratory, PAL in Wilmington, North Carolina, generates the analytical results for the split samples.

The data quality objectives are pre-defined for the ECCS data in that Mississippi considers all mobile lab data screening level data. ECCS uses the same equipment and methodology as the fixed-base laboratories with the exception of the mini-extraction modification. Mobile laboratory data is validated by comparison of a minimum of 10% split samples with PAL. Following this procedure, the data qualifies as screening data with definitive confirmation under US EPA, Region IV EISOPQAM guidelines.

All samples sent to PAL were collected as follows: The sample was transferred from the GeoProbe® clean, unused, acetate sample liner into the labeled 4 ounce (oz) amber glass soil jar. The sample jar was then transferred to the mobile lab where ECCS personnel homogenized the sample prior to taking an aliquot for analysis. Due to the limited sample volume required by the ECCS mini-extraction and the low volatility of the chemicals of concern, the initial sampling jar was resealed (after ECCS personnel removed the amount of sample needed for their analysis), refrigerated and then sent to PAL; meaning PAL analyzed the sample from the exact same sample jar as ECCS.

Equipment rinsate samples were collected for evaluation of cross-contamination potential from ineffective decontamination procedures. These were prepared by pouring distilled water over the sampling equipment after decontamination and collecting and preserving the rinsate that was generated. Equipment rinseate samples were collected in accordance with the EPA, Region IV EISOPQAM guidelines.

Field blank samples were collected by filling sampling containers that were kept in the transition zone with distilled water. Field blanks determine the presence of ambient contaminants that may not be directly related to concentrations of contaminants in the sample media.

Blind duplicate soil samples were collected for analysis and sent to both laboratories. Blind duplicates were collected by homogenizing an aliquot of sample in a disposable plastic container and splitting the homogenized sample into two containers. After ECCS took their aliquot of these samples, the remainder of the sample was sent to PAL for analysis.

SAMPLE CONTROL AND FIELD RECORDS

Sample Identification

All samples sent to PAL for analysis conform to the labeling requirements under section 3.2.1 of the EISOPQAM.

8.3.1 Chain of Custody Procedures

Samples were logged as they were collected from the geoprobe liners. Date, time and sample litholgy were recorded on each log. Samples were then transferred to 4 oz amber glass jars and the jars transferred to a small sample cooler, which was taken to the mobile lab by field personnel in charge of sample handling. Sample identification (ID), date and time sampling occurred were recorded in the field logbook before transferring the samples to the mobile lab. Upon arrival at the mobile lab, the samples were transferred to the ECCS sample custodian who logged each sample on ECCS chain of custody forms. Each sample was assigned a unique ECCS internal ID number for tracking purposes. After analysis, the samples were transferred to either a sample refrigerator in the mobile lab or stored in coolers with ice until they were either shipped to PAL for confirmation analysis or readied for disposal. For samples sent to PAL, a new chain of custody form was completed by field personnel in charge of sample handling.

8.3.2 Field Records

Field records were kept in accordance with procedures and guidelines specified in section 3.5 of EISOPQAM.

8.4 Analytical Procedures

For analysis of samples in the field, ECCS used EPA Method 8082m, modified for quantitation of chlorinated benzenes and the mini extraction procedure.

PAL used EPA Method 8082 for quantitation of PCBs. For chlorinated benzenes, it used EPA Method 8270. While Method 8270 does not cover all the chlorinated benzenes, it provides confirmation of the ones it does detect and has the added benefit of supplying an analysis of a broad range of other semivolatile organic compounds.

For the analysis of cyanide EPA Method 9012A was employed and for silver EPA Method 6010B.

Selected samples were analyzed by EPA Method 8260, primarily to confirm that volatile organic compounds were not present in the samples or part of the site contaminants.

8.5 Laboratory Quality Assurance/Quality Control (QA/QC)

QA/QC procedures for both labs were found to be virtually identical. Summaries of each laboratory procedures follow.

ECCS:

- Continuous calibration standards analyzed every ten samples or less and at the end of a run.
- Blank samples and laboratory control samples (LCS) analyzed every twenty samples or less with a minimum of one per day.
- Matrix Spike/Matrix Spike Duplicate (MS/MSD) samples analyzed every twenty samples or less with a minimum of one per day.

PAL:

- Continuous calibration standards analyzed at least once every 12 hour shift plus a minimum of every 20 samples gas chromatography/mass spectroscopy (GC/MS) criteria follows method specific tuning requirements per EPA Method 8270.
- Blank and LCS samples analyzed every 20 samples or less with a minimum of one per day.
- MS/MSD samples analyzed every 20 samples or less with a minimum of one per day.

8.6 Data Validation and Reporting

As discussed in section 8.2, the primary validation of the ECCS data was accomplished through comparison with the data from PAL.

Since Hexachlorobenzene and 1,2,4-Trichlorobenzene are the only chlorinated benzenes on the standard Method 8270 list, these two compounds and total PCBs were the parameters tracked for the data validation procedure.

Overall, the correlation to this point of the investigation and remediation activities has been excellent with the majority of sample splits showing Relative Percent Differences (RPDs) of less than 100. Considering the inherent variability of soil as a matrix, achieving 93% acceptable split data spanning several orders of magnitude of concentration serves to justify the use of the on-site data as definitive quality.

Subject: RE: kuhlman/Borg Warner

Hello Mr. Smith,

How are you? I took the liberty to respond to your e-mail to Gretchen Zmitrovich, MDEQ, for the simple reason that I wanted to put you at ease and to let you know that we have not forgotten about you. As a matter of fact, I looked forward to meeting you every time I am at Crystal Springs. You may not know this, but I spend at least one week out of each month in Crystal Springs. Last time I was there was in the middle of January 2001 and plan to be there again the week of February 19th. Perhaps I will get the opportunity to meet you then at your convenience.

You are right, we have completed the remediation on your property and I do hope that the work that was done, (the building of the shed and the fence) was to your satisfaction. The tree decontamination has also been completed. We realized given the age of the trees that not only they have been there for a long time but also have sentimental value and for those reasons we attempted to do our very best to save them. So far, our arborist has informed us that there is a very good chance the trees will do just fine.

To my knowledge, based on discussions with Robert Martin, what remains to be done in your yard is to add gravel by the shed and complete the landscaping. As you know, we have to go through the medical building yard to get to yours, and because of that we have been waiting for the weather to dry so that we can drive the heavy vehicles and bring in the gravel that is needed. Our landscaper has also been waiting for better weather to complete the landscaping. As you know though, the weather has not been cooperating at all. Also, from what I have been told, Keith Warren from Venture has been in touch with you concerning the gravel etc. earlier this week. If that is not the case, please let me know.

As far as the results from the remediation, you will definitely receive a complete report with the appropriate details. As before, the report will first be submitted to MDEQ and MDEQ will forward a copy to you. The reports for all the remediated properties are in the process of being completed. We are currently trying to meet two other, mid February, MDEQ deadlines for other activities on this project and are concentrating on those reports.

I hope that this quick update gives you a good status as to where we are today with our efforts. In the event you have further questions, today or in the future, please feel free to contact me directly at the numbers indicated below, or e-mail me if you prefer.

Best regards,

Anastasia Hamel

Subject: kuhlman/Borg Warner

Gretchen,

Haven't seen you in a while. Hope you had a good Christmas and things are going well. On November 29th I requested a copy of the test results for the additional testing done in my yard during the remediation process. I have yet to receive anything in writing from anyone. As I had mentioned on the 29th, Robert Martin informed me that there were some fairly high levels under my old boat shed, but I was not informed of the exact levels or of any other levels found whil moving dirt .

It looks like a majority of the work was done prior to Christmas. Since that time, I have noticed very little or no work at all in my yard. I haven't seen Robert Martin since Christmas. There is still some work that needs to be done to complete my yard. I feel like no effort has been made to update me on the progress, nor has anyone bothered to let me know an estimated completion date.

I would like to have a copy of the test results, as well as information regarding the status of my yard as soon as possible. If I need to obtain this info from someone else, please advise and I will do so.

I appreciate your help.

Jeff Smith

Subject: RE: Smith Property

Gretchen,

I will respond to Mr. Smith's e-mail but wanted to let you know the following:

1. The removal of contaminated soils has been completed
2. The tree decontamination has been completed
3. The shed has been replaced with a new larger one per Smith's wishes (old sheds disposed)
4. The fence has been replaced with new

What remains to be done is gravel to be brought in to be put by the new shed and finish the rest of the landscaping. As you know, it has been raining very hard and the ground is very wet and soggy. The reason for the delay is that if we start moving heavy vehicles through the medical building with gravel to get it to the Smith yard we would tear the medical building yard to bits. So we are waiting for dry weather to bring in the gravel. Also landscaping is a bit hard to do when the grass is getting moldy already because of the rain. We don't want to keep landscaping over and over.

To my knowledge, Keith Warren from Venture spoke with Mr. Smith earlier this week about what still remained to be done. Jeff Smith however does not indicate so in his e-mail.

As far as the reports for the remediated properties we are getting them completed and will submit them to you. We are trying to get the other two deadlines out of the way that we have right now for the addendum and the work plan for the ditch and have focused on those. We have not forgotten the Smiths or everyone else. Frankly, I have tried to go and see the Smiths in person every time we are in Crystal Springs but either they are not home or it is too late in the evening and with dinner and all I did not want to interrupt them.

I will copy you on the e-mail to Jeff Smith.

Please let me know if you have any questions.

Thanks.

Anastasia

Please reply to this e-mail. I would respond but I am not sure what else needs to be done in his yard or the time frame you are looking at for the completion. Seems like maybe we should get a timeline set for reports to be issued after remediation is done on a particular piece of property. Please cc me on your reply to him. Thanks, Gretchen

Thanks, I hope you're feeling better. I understand from Robert Martin that under the boat shed there was a level of 17ppm. I would like a copy of all results as soon as possible.

Thanks again,
Jeff

I'm sorry; I thought I responded. I have not seen the test results. I have verbally been informed that the levels were close to 1 so they extended the excavation closer to the house. With the holidays and a slight case of a stomach virus, I have not been in the field lately. I did, however, drive by the site this weekend and it looked like they had backfilled most of the excavation. As far as when a report will be issued, I am unsure. They will be writing the reports on their trips back to their offices. I would say it might take a couple of months to get everything finalized through my office. As soon as I receive the report, I'll let you know.

Subject: Re: CONTAMINANTS AT KUHLMAN ELECTRIC CORPORATION (PCBs)

The remediation of the medical clinic has taken longer than expected. They are remediating the medical clinic and 215 N. Jackson at the same time. The last time I spoke to anyone in the field was on Thursday. At that time, they were almost ready to backfill part of the property.

The work plan to remediate the Kuhlman property has not been developed yet. After it is submitted, it will go through a review process here at MDEQ and at EPA. We will review the issue of the Kuhlman workers at that time. As far as the time frame involved, it is hard to estimate. I would assume several months.

Gretchen:

It's an awful lot of time being spent on the clean up of the property of the clinic next door to Kuhlman and we noticed that trees are removed and carried away.

Does this indicate that the problem is greater than original report and do you have the latest update?

We also notice that the amount of time for the clinic is small compared to the actual time it is going to take to clean up Kuhlman. Do you think that it is going to be safe for the workers to be present at Kuhlman during the cleanup and how long do you think it will take?

Thanks for whatever information you have.

Herman

Subject: Re:

The first two days of the remediation the crew was waiting on approval from BFI to dispose of the soil at Jackson's landfill. Then two pieces of their equipment broke down. It has taken longer than expected but no one could have anticipated the problems. They are having to go deeper in some areas. Verbally, I was informed that the confirmation samples came back above 1 ppm. I do not have copies yet of this data though.

RE: Kuhlman Electric
Waste Profiles for PCB Contaminated Soil

Dear Ms. Daniel:

Per your request, this letter details the source of the soil and the respective tonnage of waste associated with each site.

The contaminated soil that is destined for disposal is the result of remediation activities at various residences and commercial properties surrounding the Kuhlman Electric Corporation facility in Crystal Springs, Mississippi. The source of the PCB contamination is believed to be transformer oil used in the production of electrical transformers at the facility from the mid 1950s to 1973. As shown in the laboratory reports, there are no other contaminants associated with the soil.

The locations are as follows:

Medical Clinic – Lee Avenue	774 tons
Edwards Property – 406 Lee Avenue	446 tons
Garment Shop – 414 Lee Avenue	42 tons
Frazier Property – Lee Avenue	333 tons
Duplex –408/410 Lee Avenue	63 tons
Kellum Property – 412 Lee Avenue	228 tons
Dabney/Smith Property – N. Jackson & Lee Avenue	298 tons

Excavation is currently scheduled to begin during the week of October 16, 2000.

If you have any question or comments, please do not hesitate to call Robert Martin at (828) 669 – 3929.

Sincerely,
Kuhlman Electric Corporation

SUBJECT: Transmittal of Analytical Data for Residences
Kuhlman Electric Corporation
Crystal Springs, Mississippi

Dear Ms. Zmitrovich:

Attached are site plans and spreadsheets showing sampling locations and analytical results from sampling of soils by Ogden Environmental and Energy Services. The soil samples were collected from residential properties surrounding Kuhlman Electric Corporation. Samples were collected from various depths ranging from ground surface to 4 feet below grade and analyzed by an on-site laboratory. Split samples were sent to Paradigm Analytical Laboratories for confirmation of on-site lab results.

The following properties have concentrations of PCB 1260 in excess of 1 mg/kg.

1. Medical Clinic on Lee Avenue

2. Edwards Property at 406 Lee Avenue

3. Garment Shop at 414 Lee Avenue

4. Frazier Property on Lee Avenue

5. Duplex Property at 408/410 Lee Avenue

6. Kellum Property at 412 Lee Avenue

7. Dabney/Smith Property on N. Jackson and Lee Avenue

PO Box 1023
Black Mountain, NC 28711

[828] 669-3929
[828] 669-5289 fax

8. Cooper Property on N. Jackson and Fulgham Avenue

9. Larry and Carol Wright on N. Jackson Avenue

Please contact me at 828-669-3929 if you have any questions or comments concerning these results.

Sincerely,

Martin and Slagle GeoEnvironmental Associates, LLC

Notes:
LOCATION:

JSW1: Starboard fender of boat trailer.
JSW2: Port gunwale amidships on john boat.
JSW3: Red wheelbarrow in boat shed.
JSW4: Riding lawnmower, engine cowling, right side.
JSW5: Riding lawnmower, right rear fender.
JSW6: Utility trailer, right rear fender.
JSW7: North wooden fence, between utility trailer and westernmost shed, one foot above ground surface.
JSW8: Western door of hothouse, lower metal panel.
JSW9: Window A/C unit in hothouse.
JSW10: Shop vac in toolshed area of hothouse.
JSW11: Band saw in toolshed.
JSW12: Lower cabinet doors, hothouse.
JSW13: Front fender of toy plastic ATV.
JSW14: Plastic dump truck.
JSW15: Second stair from bottom on swingset leading to slide.
JSW16: Right edge of slide, next to ground level.
JSW17: Rubbermaid grill stand in gazebo.
JSW18: Northernmost patio table on covered back porch.
JSW19: French doors leading into breakfast room.
JSW20: Table section of joined twin chaise lounge/table patio furniture.

SUBJECT: Transmittal of Revised Analytical Data Tables for Residences
Kuhlman Electric Corporation
Crystal Springs, Mississippi

Dear Ms. Zmitrovich:

Attached is one complete set of revised spreadsheets showing analytical results from sampling of soils by Ogden Environmental and Energy Services. The tables were revised based on your review and comments. Results for split samples are being prepared into tables and will be forwarded to you by Monday at the latest.

Please contact me at 828-669-3929 if you have any questions or comments concerning these results.

Sincerely,

Martin and Slagle GeoEnvironmental Associates, LLC

RE: CADD Drawings

Dear Ms. Zmitrovich:

Enclosed are your copies of corrected Autocad drawings for the Kellum property, the Dabney property and the Cooper property.

Corrections made were as follows. On the Kellum property map, the sampling point labeled as DP519 was corrected to read DP529. On the Dabney property map, the point originally labeled as DP578 was corrected to read DP587. On the Cooper property map, Fulgham was misspelled on the original.

I am forwarding copies of the corrected maps to both Martin & Slagle as well as Ms. Anastasia Hamel of BorgWarner Inc.

Any spreadsheet corrections will come from Martin & Slagle.

If you have any questions or comments, please call.

Sincerely,

OGDEN ENVIRONMENTAL AND ENGINEERING SERVICES, INC.

Timothy J. Fitzpatrick
Senior Environmental Chemist

I gave you some inaccurate information earlier. I took the sample results that
I e-mailed to you from the field maps and not from the table of data.
Apparently, there is a mistake on the map (Tim Fitzpatrick of Ogden caught the
error and just telephoned me). The sample taken in the play area was actually
0.32 ppm not non-detect. Sorry for the inconvenience.

Gretchen:

Tim Fitzpatrick tested the additional areas in my yard that I had requested. However, I have not received any hard copy of the results, as well as the map I requested showing the levels of all test results in my yard. I also don't think the swipe testing has been done in the yard and I know they have not tested inside the house.

Just wondering if you could update me on what is happening.

Thanks,

Jeff Smith

Subject: Re: Testing @ 215 N. Jackson St., Crystal Springs (Jeff Smith_

I have received a copy of the results from the additional sampling. I believe
Tim took 6 additional samples (1 in play area, 3 between house and play area, 1
in front yard, and 1 beside driveway). All of these samples were non-detect.
Also, wipe samples were taken in the yard (I am not sure where at this point)
and all wipe samples were non-detect. They have not tested inside the house but
are in the field this week and should contact you in the next week or so to
sample in the house. I spoke to Tim yesterday and he is working on getting the
CADD maps done of everyone's yards so we can give you an official report of the
work. I don't have a date on when they will be ready but I assume in a week or
so.

I don't know if you have heard that MDEQ has scheduled a public meeting at the
Chautauqua Park Visitors Center at 7:00 pm on Thursday the 21st.
Representatives from MDEQ and the Health Dept will be there to answer questions
and share the information we have learned about the site with the public.

Gretchen:

Thank you for the information. I assume that Robert Martin will consider my request for additional testing in the yard. In the meantime, I'll be waiting to hear from you regarding the interior and exterior swipe testing.

I appreciate your help.

Jeff

I have forwarded your comments to Robert Martin at Ogden. They are currently working on a procedure to sample inside the house. The solvent they generally use on exterior surfaces may damage the materials inside, so they are determining how to do it correctly. As far as the map and data, Tim Fitzpatrick is leaving Crystal Springs on Friday. He will be in the office the following week preparing the reports for each house. The information should be available shortly after that for you. Let me know if I can help with anything else.
Gretchen

Subject: Testing at 215 N. Jackson St.-Crystal Springs (Jeff Smith)

Gretchen:

I've been in the process of making a list of request and expectations for the remediation work to be done in my yard. At our last meeting you had mentioned that I would receive a copy of the plot showing the results of the various tested areas in my yard. I haven't received anything yet and was wanting an update. I also need to know what the results were from the side (south-side by Lee Avenue) of my yard which was tested last Wednesday.

Before we proceed with any remediation, I am requesting the following:

1) That additional tests be done in my yard. I would like for Ogden to test under my house and I also would like at least three other areas to be tested in my yard. One is an area right behind my house where most of the water runs off and the other is near the front yard where water runs out to North Jackson Street. The final area is in my hot house, which is attached to my work shop. It has a dirt floor and can be tested.
2) I would like for swipe testing to be performed in my backyard on all pieces of equipment, playground toys, etc. I would like for swipe testing to be performed in my workshop and storage building. I would also like swipe testing to be performed inside my house.
3) I would like a copy of ALL test results pertaining to my yard. (This includes the actual paperwork showing results of the tests that I assume were performed at the mobile lab at Kuhlman, as well as the map of my yard showing the various locations of the tests and the contamination levels found at each test site.)

Once the additional testing is complete and I have received all the requested test results, I will then be prepared to discuss the remediation process.

If you have any questions please feel free to call me at work (892-2731) or home (892-2175).

Thank you for your assistance.

Sincerely,

Jeff Smith

Re: Crystal Springs Data Summary

Ms. Zmitrovich:

Following is all the data available as of 5:30 PM on Friday Aug 18. The mobile lab had autosampler malfunctions the previous two nights and are thus still somewhat behind. We will be working through the weekend and you can reach me on my cell at 704-236-3496 if you like.

Best Regards,

Tim Fitzpatrick
